

FS EAST REAL CASE SCENARIO 2022

IN THIS YEAR'S REAL CASE SCENARIO YOU ARE REQUIRED TO PRESENT A DETAILED ANALYSIS OF THE CARBON FOOTPRINT OF YOUR CAR.

You are expected to include in your calculations the following three stages of your car's lifecycle:

- The car development
- Manufacturing
- Assembly processes

The scores will be awarded by the preparedness, depth, and comprehensibility of your analysis and not by the outcome (not the actual values). At the end of your presentation please present minimum 3 areas where you could reduce the co2 footprint of your car without noticeably compromising the performance and calculate the additional costs of it.

The result of your analysis has to be presented in 10 minutes at the Cost and Manufacturing Event during the discussion and you are allowed to use maximum two flip chart sheets (68x98 cm) to aid your presentation.
